ommonly denominated as "between of them, exce the rivers." The iron which is pro- lumbia mines, duced from these ores maintains ed with even an excedent reputation for strength lng capital to and malleability. The Kentucky many sharts t cre banks, though very actively worked before the war, have not proluced much iron since. In the last of gold and tew years, however, a desire to re- well informed sume operations has become mani fest. Several new furnaces have this been built or are under way, and the revival of interest in the iron deposits is making itself felt throughour der Western Kentucky. But, Crittenden county, despite the lact that she had formerly demonstrated that het il iron deposits are both good and re-Riable, seems slow in availing herself of the opportunity of "enling with the tide." Thus, while adjoining counties are pushing their properties into the foreground, little nothing has been done here.

ed the owners to shut down. For similar causes the Hurricane furnace, which was in blast during the latter half of that period, discontined operations.

Complete sets of the ores used these furnaces were analyzed by Dr. Robert Peter, and published in Vol. d of the o'd series of geological reports of the state (1861) I have aken the trouble to work out the terrage conquisition of the ores at brought out in these analysis, and although one of the samples was un usually poor and contained a much larger per cent. of phosphorus than usual, the result is so favorable that it may without fear be submitted for onitarison with average analyses of he principal ores of Tennessee and Alabania. It should be mentioned, pethaps, that without the poor sample mentioned, the average
